Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kellerman et al (US Patent 6,639,558) in view of Lennen et al (US Patent 5,515,057).

Kellerman et al discloses, in figure 1, an antenna system comprising a stacked patch antenna having a plurality of patch antennas (103a,105a), wherein the first patch antenna 103a comprises a high frequency patch antenna, and the second patch antenna comprises a lower frequency than the first patch antenna, see column 5, lines 16-31. Since the second patch antenna locates below the first patch antenna and the outer of the coaxial feed of the first patch antenna electrically coupled to the second patch antenna, the second patch antenna serves as a ground plane for the first patch antenna. The patent to Kellerman differs from the claimed invention because it does not disclose the stacked patch antenna comprising a differential feed patch antenna.

Lennen et al discloses, in figures 3A and 3B, an antenna system comprising a patch antenna having a differential feed, see column 10, lines 20-40. Since one of ordinary skill in the art would have recognized the benefits of receiving the circular polarization of different signals, it would have been obvious to provide the antenna system of Kellerman et al with the different feed as taught by Lennen et al.

3. The patents to Hetde, Mohamadi, Fukuura et al, Conroy, Strickland, and Rawnick et al are cited as of interest showing the antenna similar to that disclosed.
